

Year One Timeline: Resource Scarcity Mechanic

Setting Context:

The SeedFolk game takes place during a **12-month survival cycle**.

Due to **pandemic-induced collapse** of external infrastructure, Tye and his community must transition from dependence to **self-reliance**.

Resource Decline Timeline:

Month	Event / Resource Depletion	Impact
0	Pandemic begins, grid intact	Outside help and deliveries still functional
5	Water tap goes out	Players must collect/store rainwater or dig wells
8	Groceries stop arriving	Must grow own food, hunt, barter, or scavenge
12	Full grid dependency collapse	No more outside aid; must be fully off-grid

Gameplay Implication:

- Encourages players to **prepare early** (e.g., build rain barrels, start gardens, preserve seeds)
 - Enforces **urgency** and rewards foresight
 - Reinforces themes of:
 - **Environmental justice**
 - **Supply chain fragility**
 - **Community resilience**
-

 Suggested Mechanics:

- **Countdown Tracker UI** (shows water/grocery supply decay)
- **Radio Warnings** from nearby communities
- **Crafting recipes** unlocked as supply fades (e.g. DIY filter, compost toilet)
