

🌱 SeedFolk Game – Step 1: Crisis in the Supply Chain

🔄 Game Mechanic:

"Plants on EBT/SNAP → Growth System Pipeline"

Illustrated pipeline:

- Initial planting → mid growth → cardboard room (germination) → sprout → mature plant

⚠️ Tye Enters a "Crisis" Timeline

A simulated supply chain breakdown triggers limitations and scarcity for in-game resources. Each milestone month removes access to key services:

📅 Timeline of Supply Collapse:

Month

Event

3 months	SNAP stops supplying “fresh” seeds
6 months	Amazon cuts off supply routes
8 months	Plants go out of season → nurseries stop selling
Ongoing	SNAP disqualifies Tye’s household due to exceeding monthly food cost threshold

"Which means Tye needs his own nursery & mother plants!"

Implications for Game Design:

- Players must build a **seed-saving system** and **propagation lab** early on
- Introduces **nursery management mechanics**:
 - Cloning
 - Hydroponics
 - Seed banks
- Emphasizes **economic exclusion** and the fragility of state-aid systems
